Square API Provider Setup

Last Modified on 01/02/2020 12:03 pm EST

To authenticate a Square connector instance, you must register an app with Square. When you authenticate, use the **Application ID**, **Application Secret**, and **Redirect URL** as the **API Key**, **API Secret**, and **Callback URL**. If you plan to monitor events, also configure the **Webhook URL**.

See the latest setup instructions in the Square documentation.

Locate Credentials for Authentication

If you already created an application, follow the steps below to locate the **Application ID**, **Application Secret**, and **Redirect URL**. If you have not created an app, see Create an Application.

To find your OAuth 2.0 credentials:

- 1. Log in to your account at Square.
- 2. Click the application that you want to connect.
- 3. Record the Application ID.

Create an Application

If you have not created an application, you need one to authenticate with Square.

To create an application:

- 1. Log in to your account at Square.
- 2. Click the application that you want to connect.
- 3. On the Application Dashboard, click New Application.
- 4. Enter a name, agree to the terms of service, and then click **Create Application**.

Applications Documentation	Technical Writer 👻
New Application	
Your new application will grant you full API access to your Square merchant account and, optionally, grant to other Square merchant accounts via OAuth.	ant authorized API access
Application Name Awesome Docs App	
The Application Name will appear in Square Dashboard to you and any merchants using your application	on.
I agree to the Square Developer Terms of Service	
	Create Application

5. Record the Application ID.
