Introduction						
SalesLoft helps transform sales teams into modern sales organizations - converting more target accounts into customer accounts.						
The SalesLoft API provides an easy REST-ful way to programmatically interact with your SalesLoft instance data. After using OAuth 2.0 to authorize an account, the REST API is over HTTP to push and pull data from SalesLoft. In order to get started using the API, you will want to follow a few steps:	accessed					
Login to accounts.salesloft.com with the account that will own your OAuth App						
Create an OAuth App using our App Portal						
Create / Test your integration using our documentation						
Contact support#salesloft.com with any questions						

- 5. Now click 'Create New' and provide the name and the redirect URI to create a new app.
- 6. On clicking submit, the platform will generate your API credentials, which you can use to

connect to Salesloft.

Use these API credentials to create an instance with the Salesloft connector.
