

Evernote - Why is my Document Still Accessible by ID Even After Deletion?

Last Modified on 03/16/2020 3:22 pm EDT

Based on the limitation of the Evernote API, you cannot hard delete a document. When you delete a document from your Evernote account using SAP Cloud Platform Open Connectors, the note is moved into your trash folder. Because your trash folder is still a directory, the notes moved to it are still accessible. However, in the Evernote UI, you can completely expunge or undelete the note.
