

How Do You Escape Spaces in Field Names When Querying

Last Modified on 02/23/2019 1:45 pm EST

To escape spaces in field names when querying against endpoints in OCNQL, use backticks (`) around the field name. For instance to query for a field `First Name` (with a space between the two words), structure your query for Bill as:

```
`First Name` = 'Bill'.
```
