Citrix Sharefile - What's the difference between the /root and /top folders?

Some folders have shortcuts, which serve as folder names as well as IDs. The `/top` folder is the `root` level folder. This should be used in the path similarly to how a root level folder `/` would be used. The other three, `favorites`, `home`, and `allshared` will be shortcuts to your `favorites`, `home`, and `shared` **root level folders**.
