# Dropbox API Provider Setup

Last Modified on 02/12/2019 4:12 pm EST

## API Provider Setup

#### On this page

To authenticate a Dropbox connector instance you must use a developer account to create an application for Dropbox. After you register an app, record the **App key**, **App secret**, and **Redirect URIs**. You use these when you authenticate a connector instance as the API Key, API Secret, and Callback URL. If you plan to use events, also configure the **Webhook URIs**.

#### Locate Credentials for Authentication

If you already created an application, see below to locate the **App key**, **App secret**, and **Redirect URIs**. If you have not created an app, see Create an Application.

To find your OAuth 2.0 credentials:

- 1. Log in to your Dropbox developer account at https://https://www.dropbox.com/developers/apps.
- 2. Click the application that you want to connect.
- 3. Record the App key and App secret.
- 4. Record the **Redirect URI** for your app.

App key		_				
App secret		Show				
OAuth 2		Redirect URIs				
			https://staging.cloud-elements.com/elements/jsp/home.jsp			×
			https://www.cloud-elements.com			×
		https:// (http allo	https:// (http allowed for localhost)			Add
		Allow implicit gra	ant ()			

#### **Create an Application**

If you have not created an application, you need one to authenticate with Dropbox.

To create an application:

- 1. Log in to your Dropbox developer account at https://https://www.dropbox.com/developers/apps.
- 2. Click Create app.
- 3. Under Choose an API, select **Dropbox API**.
- 4. Choose a type of access, and the name your app.
- 5. Click Create app.
- 6. Record the App key and App secret.
- 7. In Redirect URIsenter the URL that you will use as the Callback URL during authentication.

		https:// (http allowed for localhost)			Add
		Allow implicit grant			

### Set Up Events

Dropbox supports webhooks. If you want to enable events when you authenticate a connector instance, complete the steps below to set up webhooks with Dropbox.

- 1. Log in to your Dropbox developer account at https://https://www.dropbox.com/developers/apps.
- 2. Click the application that you want to connect.
- 3. In Webhook URIs enter /dropbox .
