

Dropbox - What's a refid?

Last Modified on 04/15/2019 2:25 pm EDT

Dropbox includes a `refId` for certain APIs. This is the actual ID of the file sent back from Dropbox. It can be used as the `ID` with all API calls with the exception of `GET /folders/{id}/contents`.

The `GET /folders/{id}/contents` endpoint does not support the `refId` at this time.
