How to get your bulk call back in gzip format

Follow these steps to get your bulk call data back in gzip form.

First, make your POST call to /bulk/query with your query string. Be sure to add a callback URL or else you will need to refresh the call to see when it is completed.

Next, grab the ID from the response.

Now, when you get notified that the POST call has completed (or you've refreshed and see it's complete), make this call:

curl -X GET \

 https://api.openconnectors.us2.ext.hana.ondemand.com/elements/api-v2/hubs//bulk// \

 -H 'Accept: text/csv' \

 -H 'Accept-Encoding: defate, gzip' \

 -H 'Authorization: \

This will give you back the necessary data in a gzip'ed format.
