

Chargebee API Provider Setup

Last Modified on 05/13/2021 2:47 am EDT

API Provider Setup

Follow these instructions to create a new Chargebee Connected App. Register for an account at:
<https://app.chargebee.com/signup>

1. Click Settings
2. Select "API & WEBHOOKS"

3. Click "+ Add API Key"

4. Name API Key
5. Select Full Access
6. Click "Add API Key"

Add API Key

Add a new API key and use it for communication between Chargebee and your application. Assign one or more permissions to specify the access level of the new key.

Name* 4
A name for the key. Eg: server-key-v1

Use From Browser

Enabling this will allow API calls from browser.

Use From Browser Allow

Permissions

Select the permission level for the API key.

Permissions Full Access 5
Provides complete access to your ChargeBee site. Only set this access level when you're using it along with your own application server and you need more functionality than to just create subscriptions. Be very cautious and ensure you take proper care of your API keys as it provides complete administrative control through the API.

Read Transactional Data
When you only need your system to fetch data from ChargeBee.
E.g. Can be used when integrating using 3rd party apps like Zapier to synchronize data.
Can ONLY be used to read transactional data from [subscriptions](#), [customers](#), [cards](#), [invoices](#), [orders](#), [transactions](#), [addresses](#), [events](#)

Extended Publishable Key
Same permissions as the publishable key, but allows to use the "Estimate API" call as well. This API call is useful when estimating charges during subscription creation or update especially when addons, coupons or VAT is included.

Publishable Key
Recommended for use with forms that are used for creating subscriptions.
This access level allows [Create a subscription](#), [Checkout new subscription](#), API calls.

Read Product Configuration
Allows you to fetch product configurations of plans and addons.
E.g. Can be used with a shopping cart or 3rd party app synchronization service to pull plan & addon details from ChargeBee.
Note : Coupon and coupon codes are not accessible with this access level.

6

7. Copy the API Key, this will be used to provision instead of the "Username"

Your API Keys

+ Add API Key

API Keys are used for authentication to ChargeBee API every time a API request is made.
Like passwords, API keys should remain a secret. For further reading, please read notes below.

Name	Permissions	Key
[REDACTED]	Full Access	[REDACTED] 7
