# Evernote API Provider Setup

API Provider Setup

To authenticate an Evernote connector instance you must register an app with Evernote. When you authenticate, use the **Consumer Key** and **Consumer Secret** as the **Evernote OAuth API Key** and **Evernote OAuth API Secret**.

See the latest setup instructions in the Evernote documentation .

To get your API keys:

1. Log in to your account at Evernote .
2. Click **GET AN API KEY**.

3. Complete the request form.
4. In **API Permissions**, select **Full Access**.
5. Click **Request Key**.
6. Record the **Consumer Key** and **Consumer Secret**.

Your Evernote API Key is Ready

Read the information below to get started with the Evernote API

Here is your Evernote API Key

It comes in two parts: a **Consumer Key** and a **Consumer Secret**. Both are required to authenticate with the Evernote API and receive an authentication token. Your Consumer Secret should be kept private and not shared.

- Consumer Key:
- Consumer Secret:

Both of these values will be sent to you via email.

Your API key has been activated on our Sandbox development server. This is the server you'll connect to during development and testing. Once your project is ready for production use, you'll need to have your key activated on Evernote's production environment.

Next, head over to our documentation where you'll find everything from quick-start guides to in-depth explanations of core concepts and advanced topics.
