

FreshBooks Classic API Provider Setup

Last Modified on 12/30/2019 4:00 pm EST

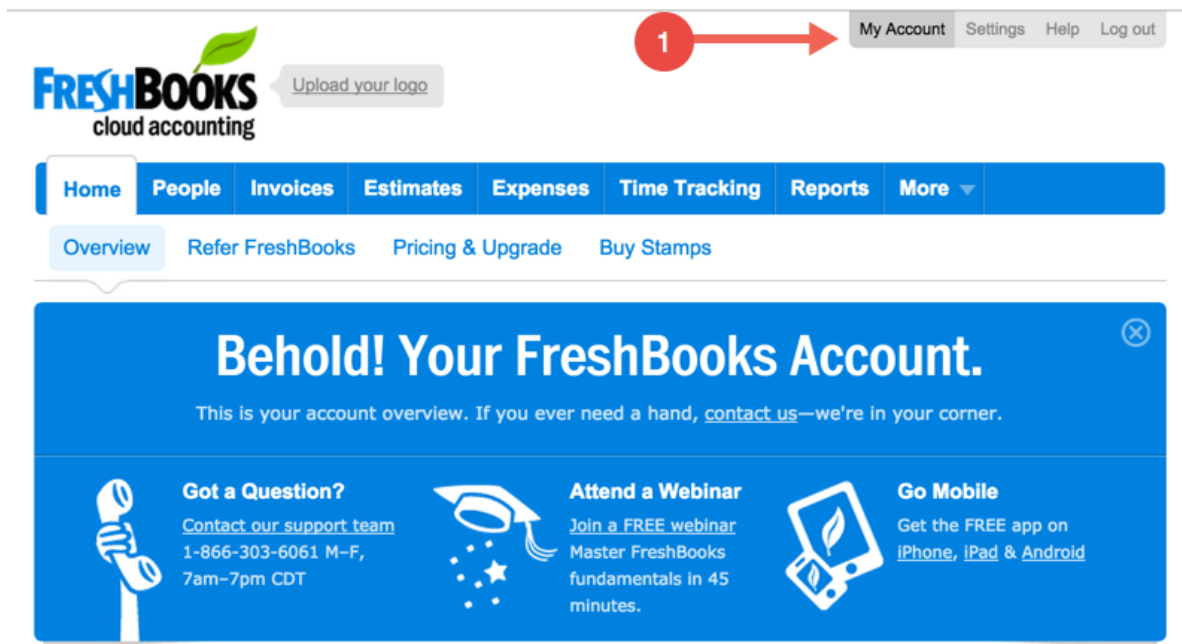

API Provider Setup

FreshBooks Classic requires an application process to enable OAuth. Below is a brief explanation from FreshBooks Classic. Read the full [article](#).

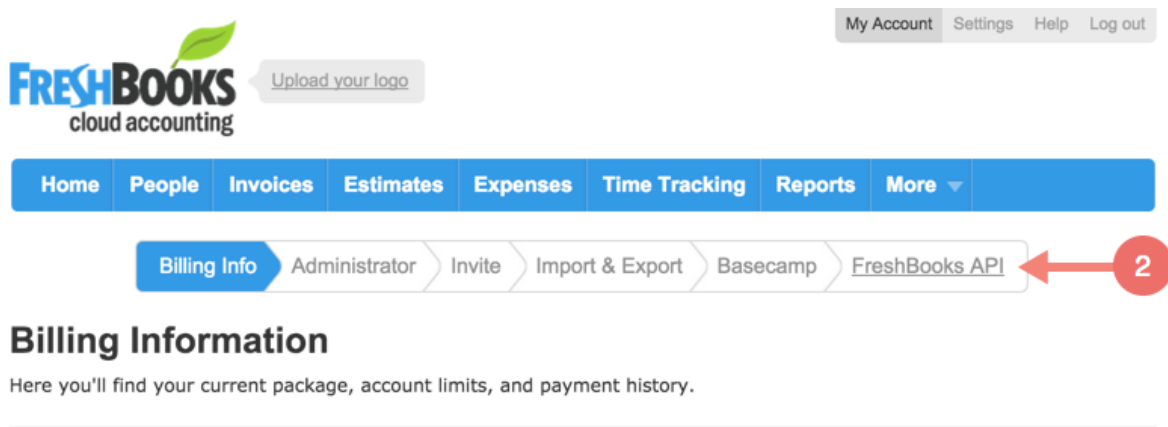

To register as an OAuth consumer, sign up for a free FreshBooks Classic account and enable OAuth by clicking on “My Account” and then “FreshBooks API”. Scroll down and you will see a checkbox labeled “Enable OAuth”. Selecting the checkbox will display a token to use as your OAuth Consumer Secret. Once OAuth has been enabled, FreshBooks will review your account and verify your request to be an OAuth Consumer. This process may take up to 5 business days. Once verified, your consumer key will be your FreshBooks system name (the portion of your account domain before freshbooks.com).

Before we will approve your Consumer registration, we need your company name. Enter the name of your company or application as you would like it to appear to your users by going to “Settings” and entering a value in the “Company Name” field.

1. Login to your FreshBooks Classic account via your FreshBooks subdomain.
2. Click “My Account”

3. Click “FreshBooks API”

4. Copy the OAuth Secret. Remember FreshBooks requires a review of your account to enable OAuth Access. Please ensure you have access prior to provisioning via the SAP Cloud Platform Open Connectors API.

FreshBooks API

Boost your productivity with [3rd-party software](#) that integrates with FreshBooks.

OAuth Developer Access

If you are writing a FreshBooks add-on, we strongly recommend [OAuth](#) for secure authorization. With OAuth, FreshBooks users can grant limited access to their data without providing their credentials. Check out our [OAuth documentation](#) for more details.

We may **require** OAuth for all add-ons in the future. FreshBooks may take up to 5 business days to approve your OAuth Application Registration.
