

Using Custom SSL Certificates

Last Modified on 08/17/2020 2:02 am EDT

Connector Builder supports the usage of Custom SSL Certificates. During the setup of building your new Connector, you can add an SSL Certificate as a Configuration option by clicking on the "+" sign and selecting SSL from the drop down that appears.

The screenshot displays the 'Setup' tab in the Connector Builder interface. It features a sidebar on the left with navigation options: Information, Authentication, Configurations, Parameters, and JKS. The main content area is divided into three sections: Properties, Configuration, and Parameters. At the top right, there are navigation icons and buttons for 'SAVE' and 'SAVE & NEXT'.

Properties Section:

Property Name	Key	Type	Default Value	Rally Name	Required	Hide UI	Remove
Username	username	text 32	Default Value	Rally Username	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Password	password	passwd...	Default Value	Rally Password	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Configuration Section:

ADD CONFIGURATION (+) SSL

Name	Key	Type	Default	Description	Required	Hide UI	Remove
Base64 Encoded JKS	base64.encoded.jks	passwd...	Default Value	documentation for additional information including sample code	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
JKS Password	jks.password	passwd...	Default Value	Rally Password for the provided keystore	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Parameters Section:

ADD PARAMETER

Name	Type	Source	Description	Required	Remove
application/json	value	request	Add Parameter Description	<input type="checkbox"/>	<input type="checkbox"/>

A red arrow points to the '+' icon in the 'ADD CONFIGURATION' button, indicating where to click to add a new configuration option.
