

Hubspot Marketing API Provider Setup

Last Modified on 12/30/2019 7:45 pm EST

To authenticate a Hubspot Marketing connector instance you must use a developer account to [create an application](#) with Hubspot Marketing. You can authenticate with Hubspot Marketing in one of two ways: **OAuth 2.0** and **API Keys**. Hubspot Marketing recommends API Keys for prototyping and OAuth 2.0 for production integrations. For more information, review Hubspot Marketing's [Authentication Overview](#).

- For authentication via OAuth 2.0, you need an application **Client ID** and **Client secret**. Use them as the for the `oauth.api.key` (Client ID) and `oauth.api.secret` (Client secret) when you authenticate with Hubspot Marketing.
- For authentication via API Keys, you need the developer account **API Key** — or **HAPIkey** to use as the `hubspot.authorization.apikey`.

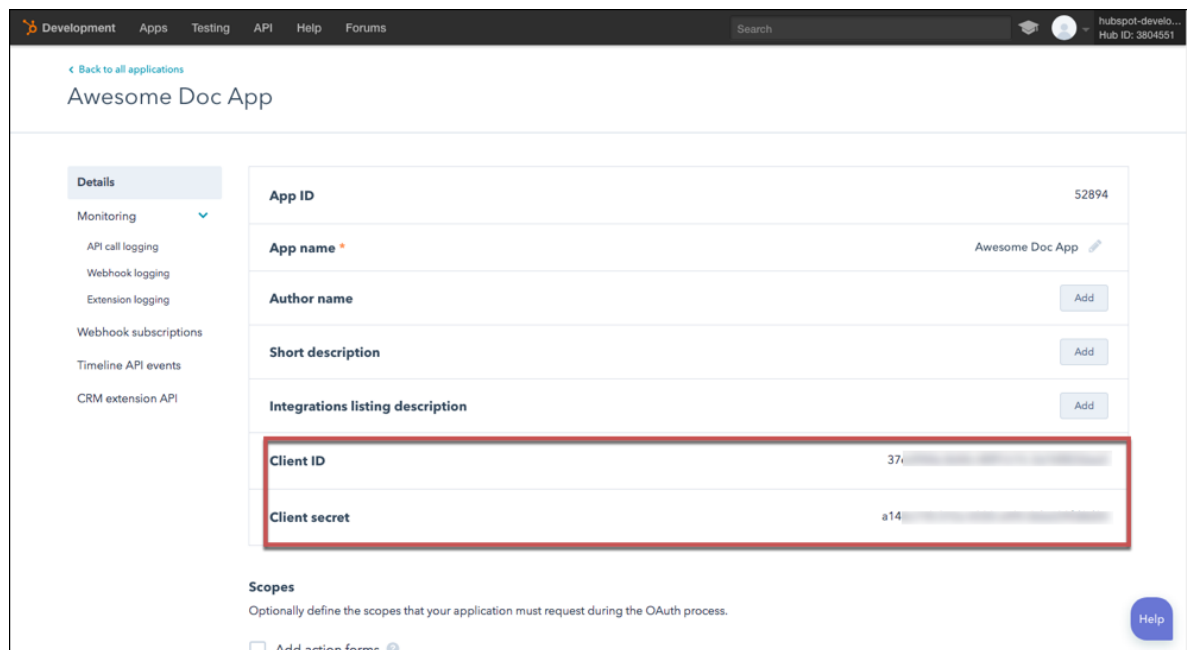

If you do not have a developer account visit <https://app.hubspot.com/signup/developers>.

OAuth 2.0 Authentication

If you already created an application, see below to locate the **Client ID** and **Client secret**. If you have not created an app, see [Create an Application](#).

To find your OAuth 2.0 credentials:

1. Log in to your Hubspot developer account at <https://app.hubspot.com/login>.
2. Click the application that you want to connect.
3. Record the **Client ID** and **Client secret**.

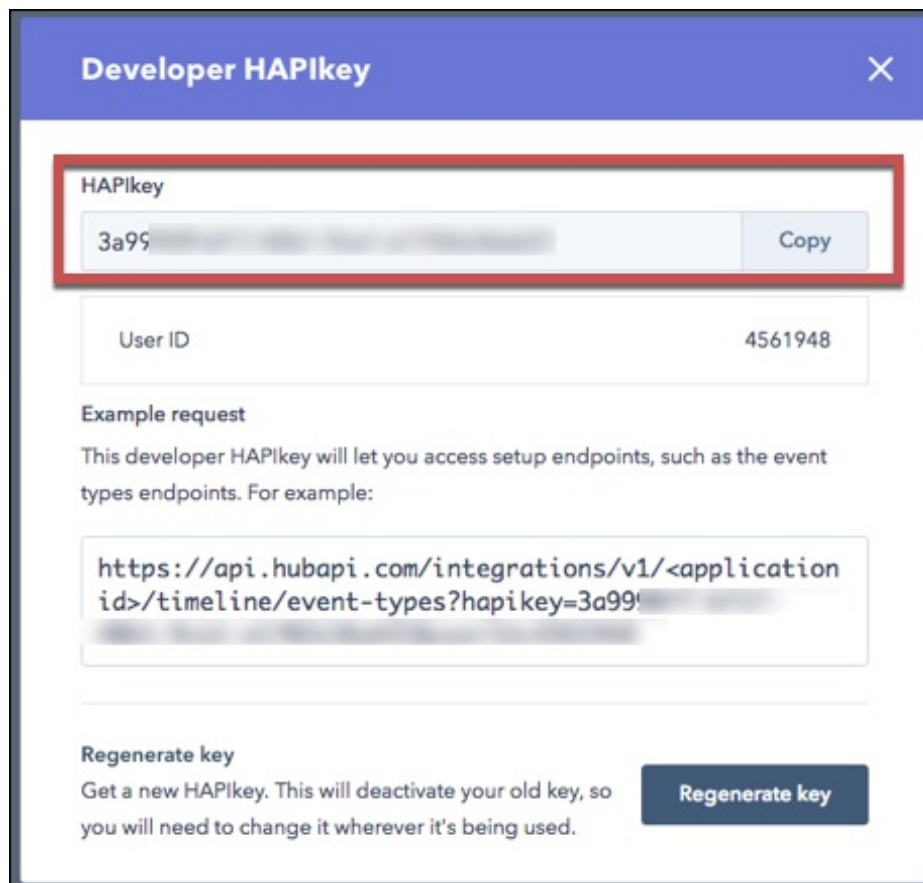

API Key Authentication

If you already created an application, see below to locate the **HAPIkey**. You do not need to create an application to authenticate with your **HAPIkey**.

To find your API Key:

1. Log in to your Hubspot developer account at <https://app.hubspot.com/login>.
2. Click **Get HAPIkey** on the top right section of the page. If you have not created an application, the **Get HAPIkey** is in the middle of the page.
3. Record the **HAPIkey**.

Create an Application

If you have not created an application, you need one to authenticate with OAuth 2.0.

To create an application:

1. Log in to your Hubspot developer account at <https://app.hubspot.com/login>.
2. Click **Create application**.
3. Enter a name and choose the visibility of the application.
4. Click the application that you just created.
5. Record the **Client ID** and **Client secret**.
