

Insightly API Provider Setup

Last Modified on 12/30/2019 8:04 pm EST

To authenticate a Insightly connector instance you must use the **User Name** or **Email Address** that you use to log in to Insightly and the **API key**.

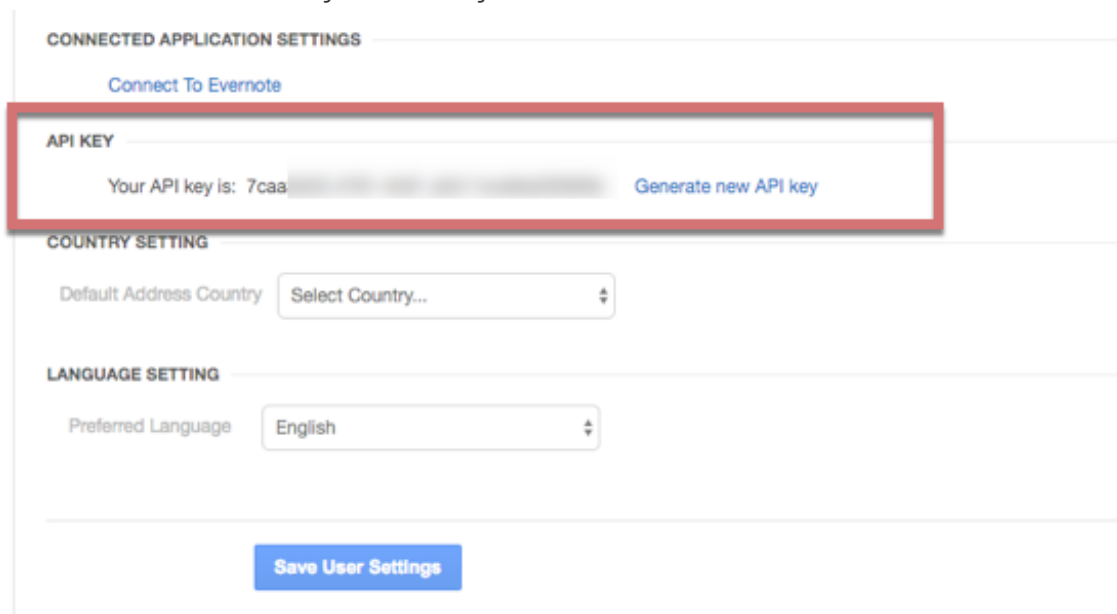

See the latest setup instructions in the [Insightly documentation](#).

To find your credentials:

1. Log in to your account at [Insightly](#).
2. Click your user profile in the top left, and then click **User Settings**.

You should land on the User Settings page, but if not click **User Settings** just to the left of the main page.

3. Scroll to the bottom to find your API key.

The screenshot displays the 'User Settings' page with the following sections:

- CONNECTED APPLICATION SETTINGS**: Includes a link to 'Connect To Evernote'.
- API KEY**: This section is highlighted with a red box. It shows 'Your API key is: 7cas...' followed by a blurred key and a 'Generate new API key' link.
- COUNTRY SETTING**: Includes a 'Default Address Country' dropdown menu currently set to 'Select Country...'.
- LANGUAGE SETTING**: Includes a 'Preferred Language' dropdown menu currently set to 'English'.

At the bottom of the settings area is a blue button labeled 'Save User Settings'.
