

Shopify API Provider Setup

Last Modified on 01/02/2020 11:58 am EST

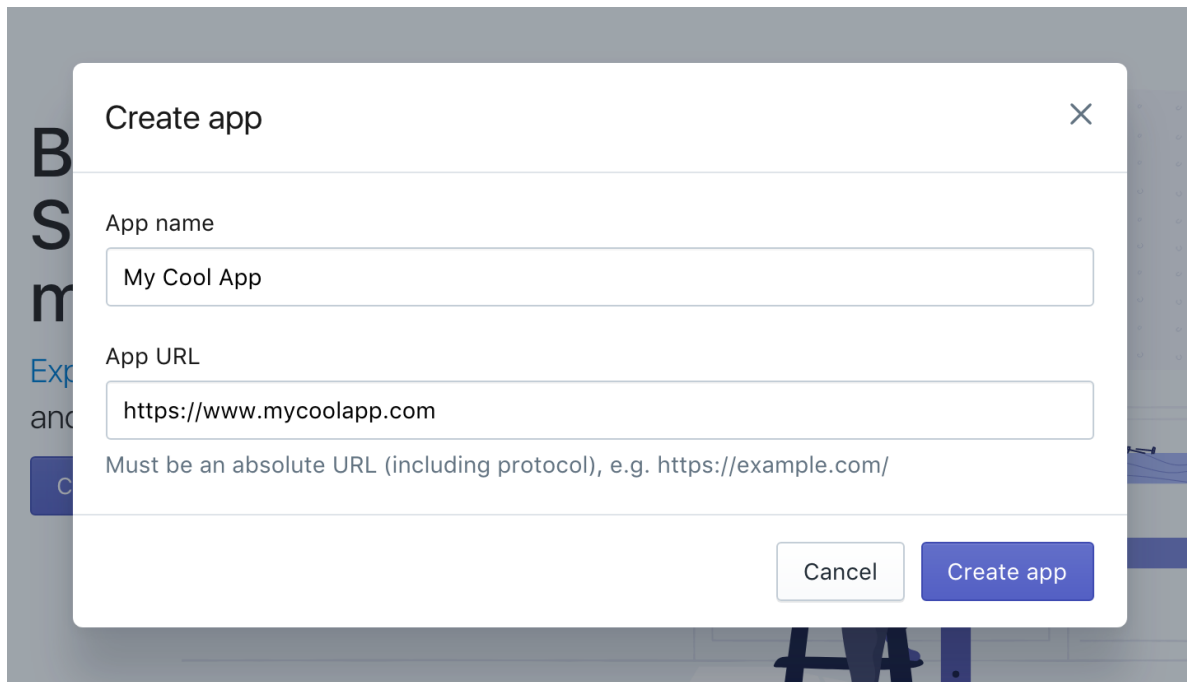

To authenticate a Shopify connector instance you must set up a store and be a Shopify Partner. If you are a developer building a store for a client, then you will need to acquire the shop name from your client

To set up the API provider:

1. Via a web browser, go to: <http://www.shopify.com/>, and then sign up for a store.
2. Go to: <https://accounts.shopify.com/signup> to become a Shopify Partner. It's free to sign up.
3. After you sign up, from the Dashboard > Apps, click **Create App**.

4. Fill out the App Information. In the **App URL** enter your application callback URL, and then click **Create App**.

5. Under `App Info` > `App Credentials`, copy the **API key** and **API secret key**.

App information

This information will be used to identify your app.

App name

My Cool App

URLs

App URL

https://www.mycoolapp.com/auth

Whitelisted redirection URL(s)

https://www.mycoolapp.com/auth

Enter URLs on separate lines. After a merchant authorizes your app, they can be redirected back to any of these URLs. You can specify the URL using the `redirect_uri` parameter during the authorization step.

App icon

Icons help merchants recognize and identify your app.

App icon

Must be a .jpg or .png, and a minimum of 512x512px

Upload icon

App credentials

Use these keys to authenticate your app with Shopify.

API key

[Redacted API key]

API secret key

[Redacted API secret key]
