

Volusion - Pagination

Last Modified on 05/06/2019 2:29 pm EDT

Volusion uses a sync style API for the `GET /products` and `GET /orders` resources. This means that pagination will automatically occur during each request, and must be reset through the Volusion website. For example, a call to `GET /products` will fetch the first page of 100 results, and then the next call will fetch the second page of 100 results. This will continue to occur until the entire store of results has been returned. There is no need to specify a `page` or `pageSize` parameter.

To reset pagination:

1. From the Volusion Admin Dashboard, select **Inventory Import/Export > Volusion API > RUN Generic/Orders**.
 2. Select a date from the list.
 3. Click **Reset Export**.
