WooCommerce API Provider Setup

To authenticate a WooCommerce connector instance you must use a Legacy API account from WooCommerce. When you authenticate, use the **Username**, **API Token**, and **API Path** from your Legacy API account.
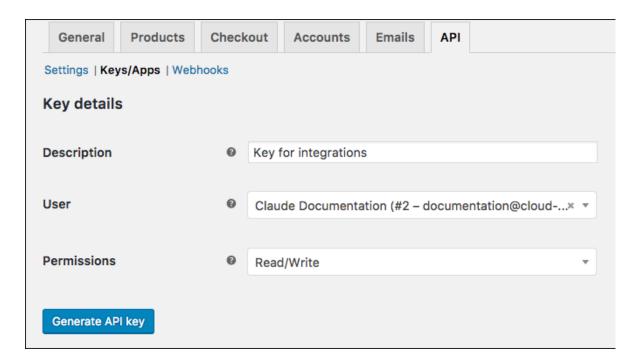

To authenticate a WooCommerce connector instance you must create a WooCommerce Consumer Key. When you authenticate, use the **Consumer Key** and **Consumer Secret** as the **OAuth API Key** and **OAuth API Secret**. If you plan to monitor events, also configure the **Webhook URL**.

See the latest setup instructions in the WooCommerce documentation.

To create your credentials:

1. Log in to your Wordpress site.
2. Go to **WooCommerce > Settings**.
3. Click the **API** tab.
4. Click **Keys/Apps**.
5. Click **Add key**.
6. Enter a description, and then select the User you would like to generate a key for.

7. In Permissions, select **Read/Write**.

   Your setup should look like this:

8. Click **Generate API Key**.

9. Record the **Consumer Key** and **Consumer Secret**.
