

# Salesforce Sales Cloud - Salesforce Sandbox Environment

Last Modified on 05/06/2019 2:42 pm EDT

The Salesforce sandbox environment has a different base URL from the production environment. Instead of <https://login.salesforce.com/>, you log in to <https://test.salesforce.com/>. When you authenticate a Salesforce instance, you must pass a `siteAddress` query parameter with the sandbox URL when getting the redirect URL. See [Authenticate Through API](#).
