

# Release Notes - Version 2.201

Last Modified on 03/13/2020 6:20 pm EDT

## Release notes -- develop (since 2.200)

### Highlights

#### EL-296 | Magento v2: enhanced to support OAuth1 authentication

- Magento V2 `OAuth1` authentication and corresponding changes for `where` clause with a SQL parser.

#### EL-472: OneDrive v2 implemented paging for 'GET /all' APIs

- Implemented paging for `GET /all` APIs in OneDrive v2

#### EL-538 Sage Live : Changes to Sage Financials

- Changed name, logo and description of `SageLive` to `SageFinancials`

#### EL-520 SAP C4C support returnTotalCount

- Added "returnTotalCount" parameter which provides the option whether to get 'elements-total-count' in headers.

#### RVCL-412 CO v2 fixes

- The changedFields to PUT `/common-resources` now works with V2
- Added `vdrFieldId` to the `/common-resources` APIs
- Couple of nullPointerExceptions fixed

## EL-107 - Intacct: Added support for 'in' operator in where parameter

- `in` operator can be used in `where` parameter for `GET /bills` and `GET /vendors` APIs. For example, `where = billno in (464572346, 'Alex1246')`  
`GET /bill-payments` API already supports `in` operator.

## EL-537 SageOne : Changed to Sage Accounting

- Changed name, logo and description of `Sage One` to `Sage Accounting`

## EL-813 | Google calendar bulk for PATCH

- Google calendar connector enhanced to support batch operation for updates(PATCH) as well.

## RVCL-437 Formula instance counter by formula

- Added a formula instance count API ( `/formulas/instances/count` ) for the UI

## EL-594 : Netsuite Finance v2 - Added POST /sales-tax-items and fixed GET /sales-tax-items

- Added `POST /sales-tax-items` and fixed `GET /sales-tax-items` API

## RVCL-244 Removed extra instance rows

- Removes extra rows causing the total connector header to be off
- Fixes empty rows in the UI instances page

## RVCL-493: Transform fields nested under arrays correctly using the configuration

- Use the configuration properties when transforming simple arrays and fields nested under arrays
- This fixes an issue where the `passThrough` configuration (along with all others) were not being used to transform some paths including: fields inside arrays, simple array

mappings, fields inside arrays that are mapped more than once, and simple array mappings that are mapped more than once

## EL-546: Eloqua- Added support for importPriorityUri field for bulk upload

- `importPriorityUri` field can now be passed in `metadata` parameter for `POST /bulk/{objectname}` API. This field is used to set the import to a different priority which overrides the default Bulk API priority

## EL-923 | ZohoCRMv2 - Fixed Oauth Refresh issue

- Fix - Oauth Refresh Issue by `Adding Prompt to OAuth Authorization URL`

## EL-805 : Intacct - Resolved swagger and updated description

- Updated `where` parameter description for `GET /bills-payments-details` API.
-
