Release Notes - Version 2.206

Release notes (since 2.205)

Highlights

EL-679: Updating connectors authentication configurations

- Updated authentication configuration for connectors in CRM Hub
- Modified logic to hide configuration values and 'base URL'

EL-819: Zendesk- Added `address` field in `tickets` metadata

- `via.source.from.address` field is available to map for `tickets` object in COs.

EL-261: NetsuiteERP metadata made consistent

- Made object metadata for Netsuite ERP consistent for 'customfield.value' field

EL-820 : Updated the description for Volusion Get Orders Where clause

- Changed the description for where clause in GET /orders API in Volusion

EL-787 : NetsuiteFinance v2 - Added CRUDS support for vendor-credits

- Added support for CRUDS `vendor-credits` in NetsuiteFinancev2

EL-818 InfusionsoftCRM - Model defect fixes

- Updated request model for `POST - /accounts` and `PATCH - /accounts`.
- Updated `element resource parameter` name for the above mentioned Api's

EL-987 DropBox: Model defects fixes

- Fixed response model defect for `GET - /search` Api

EL-892 : Dropbox PATCH API for folders/metadata fixed

- `PATCH /folders/metadata` API returns an error if attempting to move a folder into a directory where a folder with that name already exists

EL-875 Zoho CRM: model defect fixes

- Added enum values for 'Email Opt Out' field in request model for the following Api's `POST - /contacts` amp; `PATCH - /contacts` `POST - /leads` amp; `PATCH - /leads`

EL-999 DropBox Business: model defect fixes

- Added missing fields in response model for `/search` Api

EL-930 Tango Card:Updated polling config

- Updated polling config for `/orders` Api

EL-1093 OneDrive Business: Model defect fixes

- Modified response model for the following Api's `GET - /files/links` amp; `GET - /files/{id}/links`

EL-1045 : Quickbooks - Updated where clause description

- Added helpful description for where clause with supported filterable fields in GET vendor-credit endpoint.

EL-1169 : Amazon S3 file revisions API failing with 502 error

- Fixed 502 errors with the Amazon S3 connectors's endpoints `GET files/{id|/revisions` and `GET files/revisions`

RVCL-552: Use the full prefix for transformed fields in the select fields for bulk query

- Use the full prefix for transformed fields in the select fields for bulk query. For example if you have an object definition field `address.city` mapped to the vendor field `mailingAddress.mailingCity` and run a bulk query with `select address.city from objectName` it will be transformed to `select mailingAddress.mailingCity from vendorObjectName`. Previously this would have been incorrectly transformed to `select mailingCity from vendorObjectName`

EL-550 Zendesk - Updating pagination type from offSeT to page

- Fix - Zendesk Updating pagination type from `offSet` to `page`

EL-1182 Syncplicity - Event support

- Syncplicity now supports polling on `files` and `folders`

EI 1200

- Metadata for objects/items/metadata and objects/itemsSubmitProducer/metadata were fixed.
- Modified the endpoint /hubs/helpdesk/items/{sys*id}/submit*producer to /hubs/helpdesk/items/{id}/submit-producer for Standardization

Syncplicity - Header fixes

- `Offset` parameter has been removed from Swagger API documentation for `GET /files/{id}` as `Offset` is forbidden by CORS policies. This parameter is still documented in the resource description
- Resolves issue with `Elements-As-Team-Member` header when user email is provided
