How do I interact with Pardot checkbox fields?

To select or clear a field type of "checkbox" in Pardot, reference the field with `fieldname` and underscore `0` . To clear a checkbox set `fieldname` to an empty string, and to select it set it to the name of the field.

For Example

In this example, your custom field is called `customfield` and your check box is called `Testbox` .

To select it, use `{"customfield_0":"Testbox"}` .

To clear it, use `{"customfield_0":""}` .
