

# Staging Release Notes - Version v2.208.229

Last Modified on 03/13/2020 6:07 pm EDT

Release notes -- v2.208.229 (since v2.208.218)

## Highlights

### RVCL-784: Support request triggered formulas at different levels

- Request triggered formulas now require a `level` property on the trigger which allows you to choose which level of users the formula can be triggered by. The choices include `customer` , `organization` , `account` , and `user` . Only users with the correct privileges will be able to create formulas and instances at each level.

### RVCL-854 adding object id to formula executions

- Add event object id to the formula instance execution table
- Searches for true object id and not by event id

### RVCL-849 Only select the fields requested if removed unmapped fields

- Will only call vendor looking for specific fields when remove unmaped fields is on, this is only active for connectors that support this (hubspot, sfdc, etc)

### EL-1460 Fixed Great planes date gap between gregorian calendar and java calendar.

### RVCL-883 oauth proxy state

- Fixes setting custom state in redirect url when using an oauth proxy

## EL-1965: Update Authorization for Pardot APIs

- Pardot connector's APIs are going to change the way they receive authorization details in their API calls

## RVCL-604 Fixed organization swagger for users

- Fixed `/organizations/users/{emailOrId}` for usage in the UI

## RVCL-853 Updated swagger description for "GET/instances/{id}/objects/definitions"

- Updated swagger description for "GET/instances/{id}/objects/definitions"

## EL-2078 Revert LBDocs Authorization Header changes

- Revert LBDocs Authorization Header changes for Connector token
-
