

Getting the Most Recent Version of Swagger

Last Modified on 11/13/2019 2:12 pm EST

When using our Swagger documentation APIs, we recommend using the parameter **version=-1** to ensure you are getting the most up-to-date version.

For example:

```
curl -X GET
"http://api.openconnectors.ext.hanatrial.ondemand.com/elements/api-
v2//elements/{elementId}/docs?version=-1" -H "accept: application/json"
-H "Authorization: *****"
```
