

Clearing UI Local Storage

Last Modified on 02/01/2021 6:00 pm EST

If you experience an issue in the UI that appears to be a problem with your browser cache and not with the platform or UI itself, please clear your local storage by following these steps:

In Google Chrome:

1. Access <https://my.openconnectors.us2.ext.hana.ondemand.com/login> in your browser.
2. Open your dev tools.
3. Under the 'Application' tab, click on local storage.
4. Click on
5. Click on `skeletor-sap-ext-trial`
6. Press the delete key.
7. Refresh the page.
8. Log in again and re-test.

In FireFox:

1. Access <https://my.openconnectors.us2.ext.hana.ondemand.com/login> in your browser.
2. Open the FireFox Web Developer -> Inspector.
3. Under the 'Storage' tab, click on Local Storage.
4. Click on <https://my.openconnectors.us2.ext.hana.ondemand.com/login>
5. Select the row with key '`skeletor-sap-ext-trial`'
6. Right-click (or control-click if on a Mac) this row and choose `Delete "skeletor-sap-ext-trial"`.
7. Refresh the page.
8. Login again and re-test.

Note: The same steps can be performed in the Staging environment by deleting the local storage for "skeletor-staging" while logged into the Staging UI.
