

# Staging Release Notes - Version v2.208.1106

Last Modified on 12/30/2019 1:18 pm EST

## Release notes -- v2.208.1106 (since v2.208.1093)

### Highlights

EL-5216 EA-77 Add an option to set a default true null value if value doesn't exist in raw response

EL-5218 EA-2 Able to querying and transforming against a masked date field for CO API

EL-5326 EA-61 Enable connector V2 Engine for new organizations

EL-4821 | Snowflake: Unable insert field of type timestamp NTZ

Added ability to handle ntz time format for snowflake

EL-5320 | Amazon S3: Enhancing to have instance level SSE configuration

- Enhancing Amazon S3 connector, to support SSE (Server Side Encryption) through instance level configuration.
- Works like Amazon S3 default SSE.
- If users don't want to use API level headers or the /encryption endpoint this can help them
- But I would say through API headers we can solve more use cases, like if they use different encryption for different files/objects in S3. For example, When working with /files/metadata, /folders/metadata and /copy to perform the move, rename or copy

operations

## EL-5385 | Pardot - Escape single quote in where clause for Bulk

- Fix issue with non-escaped single quote while performing

Pardot Bulk  
Upload

Reduces the notification data retention from 30 to 14 days
