

Act! 365 API Provider Setup

Last Modified on 03/16/2020 3:40 pm EDT

To connect with Act! 365 and explore the different functionalities offered by the platform, follow the instructions below:

1. Log into <https://actcloud.3scale.net/> to get your developer key. If you do not already have an account, you'll need to sign up.
2. After logging in, click the **Give me my developer key now!** button.

3. You will now see the developer key for your application.

4. Visit <https://app.act365.com/#/login> and sign in using your email and password.
5. Once you're logged in, click the **Profile** icon to your bottom left corner, and then click **Apps & Integrations**.

6. You will find your API key on this page under the API key section.

API Key:

Your API (Application Programming Interface) token grants third party applications access to your account. This can be used to connect to a variety of web services. Note that an API key grants full control access to your account and the content in your account. Use of this key may compromise your accounts security and should be used only with integrations you fully trust.

If you regenerate this key any existing connected applications will fail to work until you update it.

You can also regenerate your API key by clicking on the **Regenerate API Key** button.

7. Use the Developer key and API key to provision an instance with the Act! 365 connector.
