

# Production Release Notes - Version v2.208.229

Last Modified on 03/13/2020 6:42 pm EDT

Release notes -- v2.208.229 (since  
v2.208.195)

## Highlights

### EL-861 | Fixed issue with AutoTask mismatched

`emailAddress` prop

- Now the `/contacts` API will return `emailAddress` and `eMailAddress`. Both hold the same value.
- Since, the existing `emailAddress` is not aligned with AutoTask metadata.

### EL-1422 Added configuration to default optionally use Version 2 XML parser

- A new platform configuration `xml.parser` is available to use SAP Cloud Platform Open Connectors Version 2 XML parser. The Version 1 parser can sometimes run into issues when parent connectors/nodes contain both inner text and child connectors. Version 2 is much more reliant in handling this. Set this configuration's value to `v2` to opt-in. To maintain backwards compatibility all connectors will default to using Version 1

### EL-1634 Ability to get Connector Swagger docs by objectName or by operationId

- Added new APIs to retrieve swagger docs by objectName  
`GET /elements/{id}/objects/{objectName}/docs`
- Added new APIs to retrieve swagger docs by operationId  
`GET /elements/{id}/operations`

GET

`/elements/{id}/operations/{operationId}/docs`

## EL-1673 - Tangocard - Normalize response to return list for /catalogs API

- Tangocard - Fix /catalogs API not returning list in response by adding Response Root Key
- Added pagination ability to /catalogs API

## EL-1720:Swagger Validation fixes for twilio

- Fixed swagger validation issue raised

## EL-1432:Hide page parameter for APIs from Swagger Generation

- Hide the Page parameter from APIs from the swagger UI API-docs page

## RVCL-784: Support request triggered formulas at different levels

- Request triggered formulas now require a `level` property on the trigger which allows you to choose which level of users the formula can be triggered by. The choices include `customer` , `organization` , `account` , and `user` . Only users with the correct privileges will be able to create formulas and instances at each level.

## EL-1705 Fixes Bill Charge Endpoint in Etsy

- Resolved Bug for Bill Charge Endpoint in Etsy connector.

## RVCL-854 adding object id to formula executions

- Add event object id to the formula instance execution table
- Searches for true object id and not by event id

## RVCL-849 Only select the fields requested if removed unmapped fields

- Will only call vendor looking for specific fields when remove unmapped fields is on, this is only active for connectors that support this (hubspot, sfdc, etc)

## EL-1074 removes contactId and accountId from bulk headers as vendor is not responding

- Removes `contactId` and `accountId` in bulk response for `BasicCustomObject` as vendor is not responding with these.

## EL-1460 Fixed Great planes date gap between gregorian calendar and java calendar.

## EL-1293 Created new resource in Evernote connector to delete notebooks

- New Resource for EverNote, `/delete` on top of ever note notebooks. This will perform and expunge i.e, permanent delete on top of the notebook.

## RVCL-883 oauth proxy state

- Fixes setting custom state in redirect url when using an oauth proxy

## EL-1992 | Enhanced bulk download by considering select fields

- Now user can use bulk query `select fields` to pass in the required field names to retrieve over a bulk job.
- Helps the Hubspot users with many properties for an object by limiting the number of fields to retrieve through `select fields` in the bulk query. Since HubSpot doesn't encourage to pass in all the fields at a time.

## EL-1965: Update Authorization for Pardot APIs

- Pardot connector's APIs are going to change the way they receive authorization details in their API calls

## RVCL-604 Fixed organization swagger for users

- Fixed `/organizations/users/{emailOrId}` for usage in the UI

## RVCL-853 Updated swagger description for "GET/instances/{id}/objects/definitions"

- Updated swagger description for "GET/instances/{id}/objects/definitions"

## EL-2041 Adobe - Modified the vendor path

- Added support for pagination to `Agreements` , `Users` , `Groups` and `Widgets` resources

## EL-2078 Revert LBDocs Authorization Header changes

- Revert LBDocs Authorization Header changes for Connector token
-
