Production Release Notes - Version v2.208.1166

Release notes -- v2.208.1166 (since vhotfix-EL-5823)

Highlights

EL-5118 | Event hooks: JS event hooks should only be invoked based on its type

EL-5469 | Unified retrieval of hooks and parameters

EL-5465, EL-5235, EL-5265, EL-5370 New connector Coupa 11 resources with all cruds and 5 with getall and get get by id

- New connector Coupa 14 resources

EL-5449 - Disabled tryout Feature for PCI in-compliant resources

- Disabled tryout Feature for PCI in-compliant resources

EL-5161 | Sage 50 US connector beta release

- We added the Sage 50 US connector to the Finance Hub, give it a whirl!
- Initially released as beta as:
- Only bulk download is supported
- Events are not supported, but will be coming in the future

EL-4788 fixed filename empty in metadata bulk query

- Fixed issue with the name of the downloaded file when no file name is given

SLYT-1591 - Disabled CORS protection in the API server for disallowed origins

- The API server does not currently provide CORS protection; that is the responsibility of each client application using the API server
- However, the API server was returning CORS headers, e.g., the `Access-Control-*` headers on the HTTP response regardless of whether the provided `Origin` header on the request was allowed or not. This was inconsistent behavior and provided guidance to client applications that CORS protection was perhaps supported by the API server.
- Addressed this issue by ensuring that only allowed origins, currently none, will result in the HTTP response containing the `Access-Control-*` headers, else none of the CORS headers will be returned on the HTTP response.
