

Microsoft Dynamics CRM - Error Retrieving Column

Last Modified on 03/16/2020 3:17 pm EDT

You may receive this kind of error when querying or mapping fields to Dynamics CRM objects:

```
Retrieve can only return columns that are valid for read. Column : isprivate. Entity : account"
```

If you receive this error, the field is likely not valid for reading purposes. You can check to see if that field is valid by navigating through Microsoft's [Entity Documentation](#) and checking if your object's field has the following field flag: "IsValidForRead": False.
