

Microsoft Dynamics CRM - Characters to Avoid in your Dynamics Password

Last Modified on 03/16/2020 3:17 pm EDT

Although the use of special characters is highly recommended when it comes to setting up a password, here is a list of characters that should be avoided when setting a password for Microsoft Dynamics: `[\ ^ $. | ? * + () # / % ' " `` to prevent issues in provisioning instances.

The error message reported by customers that had one or more characters from this list in their passwords is the following: *"Error = Format of the initialization string does not conform to specification starting at index {x}"*.
