

# Gmail - How to POST/messages via API with an Email Body Content

Last Modified on 03/16/2020 3:19 pm EDT

When using the API call to **POST /messages** for the Gmail connector, the JSON payload should reference the key "data" for the email body content.

Here is an example of a working payload:

```
{  
  
  "from": "YourEmail",  
  
  "subject": "TestEmailWithBody",  
  
  "to": "EmailAddressToSendTheMessage",  
  
  "data": "This is a test text message."  
  
}
```
