

# Slack - How to see a list of subscribed Slack channels

Last Modified on 03/16/2020 3:32 pm EDT

To view a list of your subscribed Slack channels using the API, you must include the *channels:read* permission during instance provisioning within SAP Cloud Platform Open Connectors.

After an instance has been successfully created, open the API Docs and use the GET method call on the channels resource to get all of the logged-in user's channels.
