

# Google Drive - Folder Permissions

Last Modified on 02/01/2021 5:21 pm EST

When looking for an API call that deals with the Google Drive folder permissions, the API call `files/{id}/permissions` can be used also for folders as follows:

1. Retrieve the id of the folder through the call `GET/folders/content`.
2. Copy/paste the id in the `POST/files/{id}/permissions` API call and use the below payload:

```
{  
  "role": "reader",  
  "type": "anyone"  
}
```

The above payload adds the reader permission with anyone with the link.
