

# Jira On Prem API Provider Setup

Last Modified on 03/19/2020 6:47 pm EDT

To authenticate a Jira On Prem connector instance, you must provide the **Username** and **Password** that you use to log in to Jira. You must also enter the **Server URL**, the base URL you use to access Jira.

You can create a connection to Jira On Prem directly via an IP Address and Port Number, e.g.

```
123.123.1.123:3306
```

This method requires require a port be exposed so a connection can be made with SAP Cloud Platform Open Connectors. When creating an instance, the user would input the IP Address and Port Number exposed publicly.
