Production Release Notes - Version v2.208.1455

Release notes -- v2.208.1455 (since vhotfix-SDR-3259)

Highlights

EL-7118:Ping API Standardization for Instance Validation

- Standarize /ping API for all connectors

EL-4703: DbDeploy Webservice

- The Aim here is to generate sql script file for the following:

1. Newly created connectors
2. Cloned connectors
3. Extended connectors

- Steps to generate sql script file are:

1. Users will be provided two webservice urls. Those are:a) For new connectors - *http://localhost:8080/elements/api-v2/create?elementKey=qwertyscriptNumber=123456override=truerevert=true*b) For cloned/extended connectors - *http://localhost:8080/elements/api-v2/update?elementKey=qwertyscriptNumber=654321override=truerevert=true*
2. Users need to update **dbdeploy.location** in elements.properties file proving the location where all sql script files resides currently(For example dbdeploy.location = /Users/username/soba/framework/src/main/resources/db/postgres/)
3. Hitting the url will generate two files. One normal and another, its revert file.
4. Following are the query params used in the url: a) Required parameters : elementKey and scriptNumberb) Optional parameters : override amp; revert
5. Users of only **localhost** and **snapshot** will be able to generate script files.

Upgrading Netsuite Token

El 7288 soba pr testing env setup

EL-7761 | Get connectors is not returning extended flag

- Get All / connectors to return extended flag when queried for.

EL-7675 EL-7731 :GreatPlains new resource POST purchase-invoices amp; purchase-receipts

- New resource added POST /purchase-receipts and /purchase-receipts
- Included to handle query param IN for GET /purchase-orders API to restrict records. As vendor is not supporting

pagination, if there are a lot of records, GP vendor API fails, hence we can restrict our records with query params
