## Resetting User Token via API

To reset an organization token or user token via API, use the `POST /authentication/user-secret-reset` endpoint. Resetting these secrets takes effect immediately and the old ones no longer work.

Example:

```
curl -X POST \
  https://api.openconnectors.us2.ext.hana.ondemand.com/elements/api-v2/authentication/user-secret-reset \
  -H 'authorization: User <USER-SECRET>, Organization <ORGANIZATION-SECRET>' \
  -H 'content-type: application/json'
```
