Tipalti

Tipalti Connector Documentation

On this page:

Authentication Prerequisites

The Tipalti connector uses a **custom** authentication workflow. Before you can authenticate an instance of the Tipalti connector, you need the following:

Provider sandbox

A trial or paid Tipalti account is required. Tipalti provides a sandbox environment for development and testing and the production environment for deployment. For more information, refer to Tipalti's [Development Documentation](#).

Required Authentication Parameters

You can authenticate a connector instance using the UI or via API calls. For detailed information on how to authenticate an instance, see our related documentation:

- [Authenticate a Connector Instance \(UI\)](#)
- [Authenticate a Connector Instance \(API\)](#)

To authenticate an instance of the Tipalti connector, you will need the following parameters:

Parameter Name/UI Value	API Value	Description
Tipalti URL	baseUrl	The Tipalti API URL to make API calls
Encryption Key	encryptionKey	The key found in Tipalti under Administration > Integrations > API keys
Payer name	payerName	The name field under Administration > General > Contact details
OAuth Callback URL	oauth.callback.url	Default value is https://auth.cloudelements.io/oauth (See Authenticate a Connector Instance (API) for more)

Sample Configuration JSON

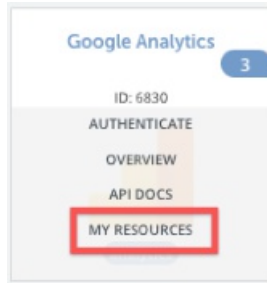

```
"configuration": {
  "oauth.api.key": "[myApiKey]",
  "oauth.api.secret": "[myApiSecret]",
  "oauth.callback.url": "https://auth.cloudelements.io/oauth"
}
```

Connector Fact Sheet and Reference

Authentication and Configuration Parameters

To see all authentication parameters for the Tipalti connector, follow these steps:

1. Sign in to SAP Cloud Platform Open Connectors and navigate to Connectors.
2. Hover over the card for a connector, and then click My Resources.

3. In the top navigation toolbar, click Setup.
4. From the Setup page, you can view a complete list of the connector's authentication and configuration parameters.

Events and Supported Resources

The Tipalti connector does not support events for any of its resources.

Queryable Endpoints

You can use OCNQL to query the following endpoints of the ReadyTalk Illuminate connector:

- GET /bulk/jobs
- GET /invoices
- GET /payerfees
- GET /payments
- GET /vendors
- GET /{objectName}
- GET /{objectName}/{objectId}/{childObjectName}

Connector API Documentation

The base URL for all API requests is

`https://api.openconnectors.us2.ext.hana.ondemand.com/elements/api-v2` .
