

# Production Release Notes - Version v2.208.1827

Last Modified on 02/01/2021 7:00 am EST

## Release notes -- v2.208.1827 (since vhotfix-ENG-2109)

### Highlights

ENG-1636 | fix(framework): address out of bounds exceptions within Histogram (#13400)

ENG-1680 add service tests for sfdcservicecloud

Revert "Revert "Merge pull request #13415 from cloud-elements/element-request" (#13445)"

### ENG-1389 | Added initial Google Ads connector

- Added the Google Ads connector to the General hub! The Google Ads API is the single, unified service for retrieving objects and performance statistics. This is an important difference between the Google Ads API and the AdWords API. In the AdWords API, you had to use one set of services to retrieve objects, and another service to retrieve performance statistics. In the Google Ads API, this functionality is combined under GoogleAdsService.
-
