

Retrieving Bulk Results with Special Characters

Last Modified on 02/01/2021 3:53 pm EST

When using the bulk feature to download data containing special characters, the API call `GET/bulk/{id}/{objectName}` should have the content-type manually set as `application/json;charset=UTF-8` in the application calling the bulk endpoint. Here is an API call example ltha retrieved the correct data containing special characters:

```
curl -X GET \  
  https://api.openconnectors.us2.ext.hana.ondemand.com/elements/api-v2/bulk/{id}/{objectName} \  
  -H 'Accept-Encoding: gzip, deflate' \  
  -H 'Authorization: User *****, Organization *****, Element *****' \  
  -H 'Content-Type: application/json;charset=UTF-8' \  
  -H 'accept: application/json' \  

```
