

Formula Instance Deactivation Criteria

Last Modified on 02/01/2021 6:36 pm EST

Formulas that fail executions over 100 times in a 6 hour period without a single success are automatically disabled. To receive a notification when a formula instance is disabled, specify the [Email](#) address under the [Notification Settings](#) section when creating/editing the formula instance. If the notifications are enabled, there should be two warnings before the formula is actually disabled.
