Base URL

The SAP Open Connectors base URL differs depending on your region and environment:

Region	Production Environment	Staging Environment
North America	`https://api.openconnectors.us2.ext.hana.ondemand.com/elements/api-v2`	`http://api.openconnectors.ext.hanatrial.on v2/`
Europe	`https://api.openconnectors.ext.hana.ondemand.com/elements/api-v2`	`None`

HTTP requests to the REST API are protected with HTTP Custom authentication with your Organization and User secret and a connector instance token. We use many standard HTTP features, like HTTP verbs, understood by most HTTP clients. JSON is returned in all responses from the API, including errors. The APIs have predictable, straightforward URLs and use HTTP response codes to indicate API errors.
