

On-premise Software Installation Support

Last Modified on 06/14/2022 7:14 am EDT

SAP Open Connectors does not support the connection of on-premise installations/endpoints unless they are internet-facing deployments (IFDs) and not behind a firewall. This is applicable for all connectors vendors that offer on-premise installations, including but not limited to MS Dynamics, SFTP, and DB connectors (MySQL/PostgreSQL/MS SQL, etc).
